

Small IC Feeder SIF III / SIF III-L

The Small IC Feeders (SIFs) are designed for feeding components such as 8, 14, or 16 lead SOIC's, MSOP's, TSOP's, and TSSOP's up to 28 lead.

The feeders solve the common problems experienced when using vibratory or belt feeders for the smallest of these types of components.

Problems such as jams, component being lost from the pick point, and difficulty picking because of mold flash are eliminated using these feeders.

The feeders are also very versatile. Converting the feeder to feed a different component package only takes a few minutes.

Key Benefits:

- Highly reliable feeding
- Only one feeder slot used in most cases
- Perfect price-performance ratio
- Versatile
- Refresh time less than 1/2 second

Host Machines

- Assembleon
- Fuji
- Juki
- Panasonic
- Samsung
- Siemens
- Tyco
- Universal
- Special machines and robotic applications

Our Product Portfolio

Label Feeder, also for special parts

Label/ Laser Marker and labels

Tape Feeder und accessories

Tray Handler / Reject Parts Conveyor

Manual Taping Systems

Automatic Packing Systems

Univers. In-System Programmers

Reflow Inline Video Camera

Optical Bonding

Thermal Bonding

Place-N-Bond Underfilm

Depaneling Systems
